Product-minded engineer with 4 years of ByteDance experience across micro-frontends, engineering efficiency, performance, stability, and AI-assisted development. Strong at turning complex business workflows into reusable platforms and measurable engineering improvements.

MAJOR PROJECTS

ByteDance Technology Co., Ltd.

2022.06 - Present

Product R&D and Engineering Architecture - Douyin Creator Platform

- SchemaTable Agent:** owned end-to-end design and implementation of SchemaTable. Delivered a base table implementation in **1 hour**, reduced development cost, and improved R&D efficiency by **3x**. Rolled the standard out across **5** business lines and nearly **120+** scenarios. Unified interaction patterns, improved product experience, and used **LLM** and **MCP** to convert D2C UI drafts into code with a **76%+** adoption rate, enabling online configuration.
- Douyin Creator Platform Stability:** led stability work for the Douyin creator platform and creator center. Built pre-launch crowd testing, coding standards, micro-frontend performance metrics, gray-release regression prevention, channel governance, reusable dashboards, and alert rule sets.
- Douyin Creator Platform Performance:** improved engineering and user-facing performance. Introduced a Rust-based toolchain with **5x** faster builds, optimized FMP and INP, advanced component platformization, reduced bundle size by **40pp+**, reduced FMP by **25pp+**, lowered INP by **83pp**, lifted retention by **2.3pp+**, and improved user satisfaction by **60pp+**.

ENGINEERING SKILLS

- Solid Web fundamentals: W3C standards, HTML, CSS, computer networking, page layout, responsive design, interaction quality, and user experience.
- Hands-on exploration of AI products; familiar with LLMs, LangChain, MCP, and practical implementation patterns.
- Full-stack capability with NestJS, PostgreSQL, Next.js, SSR/SSG rendering, and Docker-based deployment awareness.
- Experience with micro-frontends, performance optimization, INP/FMP metrics, and Rust-based tooling improvements.

WORK EXPERIENCE

ByteDance - Douyin - Local Services

2022.06 - Present

Engineering Productivity - Experience Optimization - Quality - Feature Delivery

- Responsible for consistency design and integration of the micro-frontend shell. Beyond feature delivery, continuously improved user experience, page performance, and interaction quality.
- Led 0-to-1 project setup, maintained supporting infrastructure, and handled difficult technical initiatives such as INP and AI projects to improve team efficiency and delivery quality.

ByteDance - Education - PreK

2021.06 - 2022.06

Feature Delivery - Website Maintenance - Technical Planning - Incident Handling

- Helped define frontend development plans, participated in feature iteration and product upgrades, and collaborated with frontend teammates to strengthen technical practices and shared knowledge.

FRONTEND & DELIVERY

- Uses ES6+ with an emphasis on code quality and maintainability; familiar with Webpack and TypeScript.
- Develops primarily with React and also has experience with Vue.js and Vite.
- Applied Node.js, frontend security, Monorepo practices, and frontend monitoring; uses Jest, ESLint, and CI/CD to protect code quality.
- Active in technical sharing with **10+** internal articles, ByteTech recommendations, **300+** referrals collected across channels, and a Spot Bonus award.

IMPACT HIGHLIGHTS

- Improved platform R&D efficiency by **3x** and expanded reusable table capability across **5** business lines and **120+** scenarios.
- Reached **76%+** code adoption for AI-assisted D2C conversion using LLM and MCP workflows.
- Delivered measurable performance wins: **5x** faster builds, **40pp+** smaller bundles, **25pp+** lower FMP, **83pp** lower INP, and **2.3pp+** retention lift.
